When traditional drainage becomes a limitation

Traditional drainage can limit the choice of premises, store layout and future changes. Refrigerator and freezer counters, along with other equipment, must be positioned in accordance with existing drainage, while making changes to a gravitational drainage system often entails extensive floor construction work and has a major impact on the rest of the store.

Limits the choice of premises

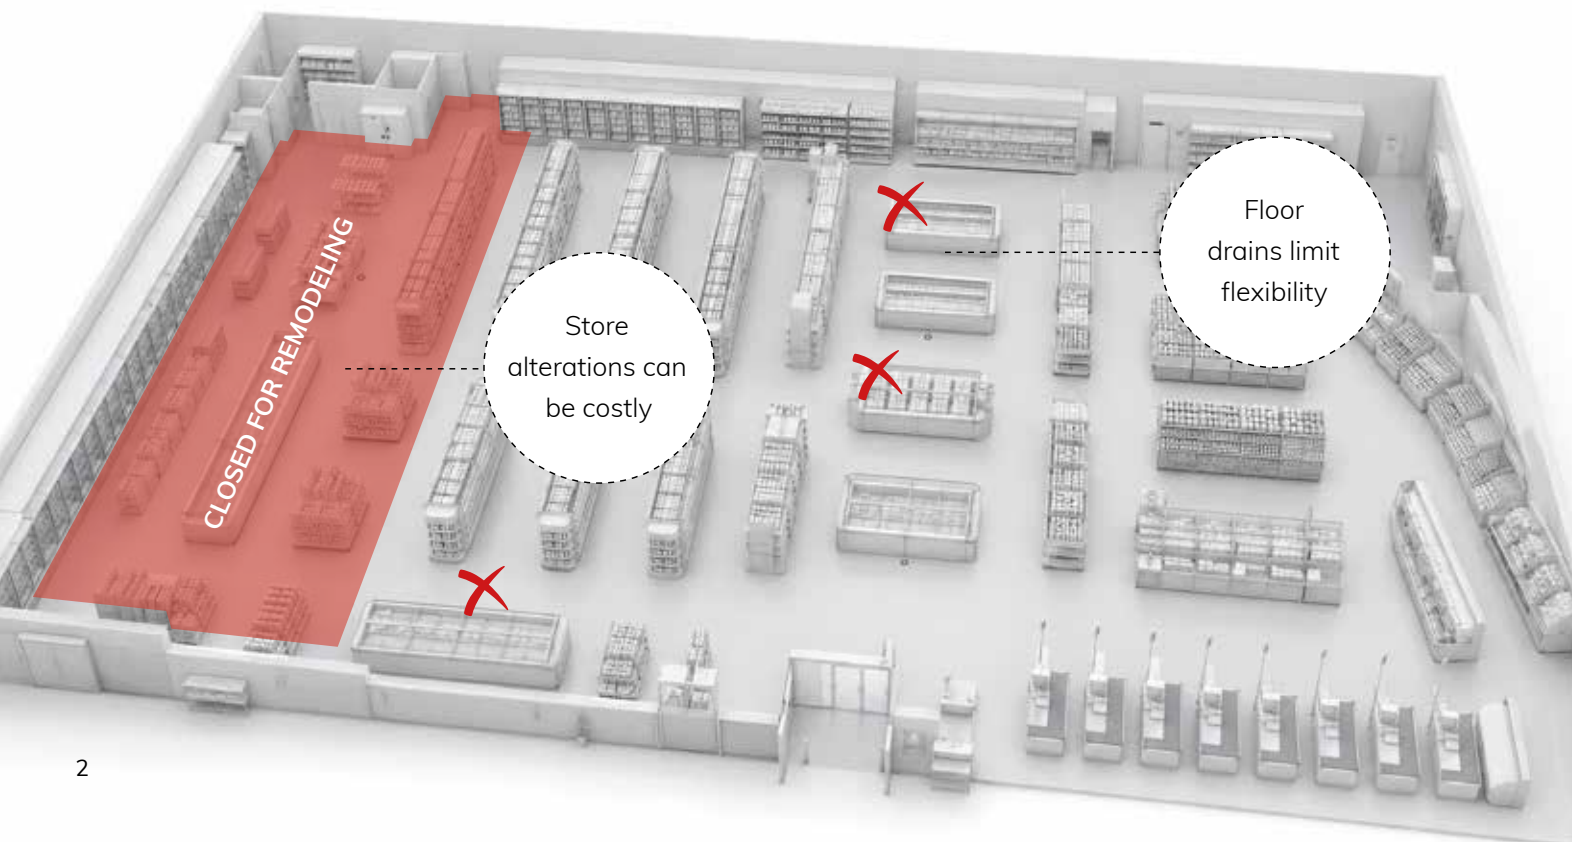

Attractive locations for store establishment have to be ruled out due to unsuitable existing drainage and the complexity of replacing it.

Restricts store layout

Positioning of refrigerator and freezer counters is highly dependent on established drainage points.

Makes refurbishment more extensive

For most shops, floor work takes more time, bring higher costs, and creates noise and dust – and may entail closure of the entire store, or parts of the store, while the work is carried out.

Less disruption Greater possibilities

Jets® vacuum systems for supermarkets enable store establishment in almost any location, and also allow the grocery chains to make frequent changes to the store layouts over time. The Pipes are routed upwards to the ceiling, while the low-building tanks fit seamlessly beneath refrigeration counters. The vacuum system takes up minimal space and requires very little structural work. Jets® vacuum technology can meet a wide range of drainage needs in supermarkets.

Greater freedom in choosing premises

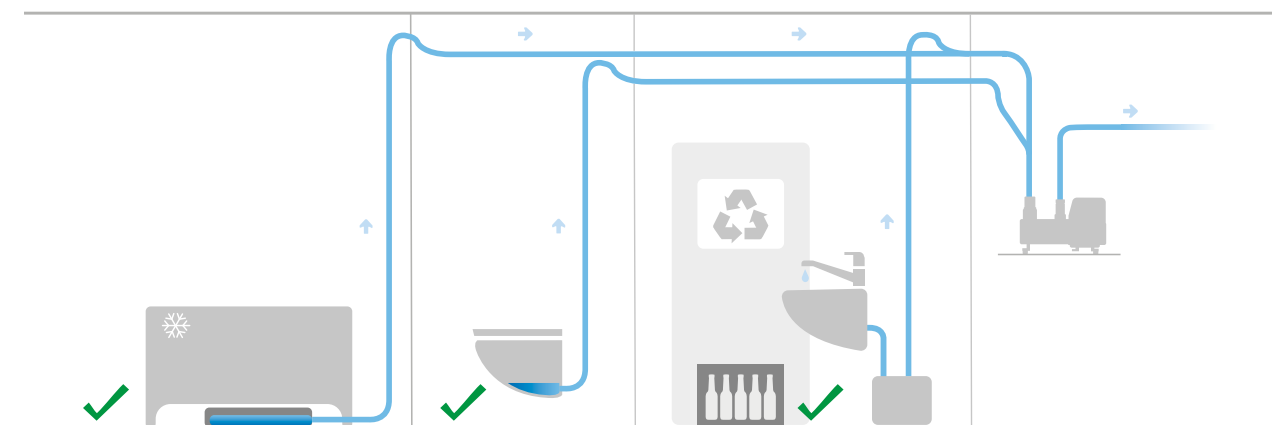

When existing gravitational drainage pipes are no longer relevant, all locations become feasible for store establishment. Wastewater is transported to a single discharge point, even from locations where traditional drainage falls short.

More flexible layouts – less space required

Compact components and efficient piping allow refrigerator and freezer counters and other equipment to be positioned according to store- and customer needs.

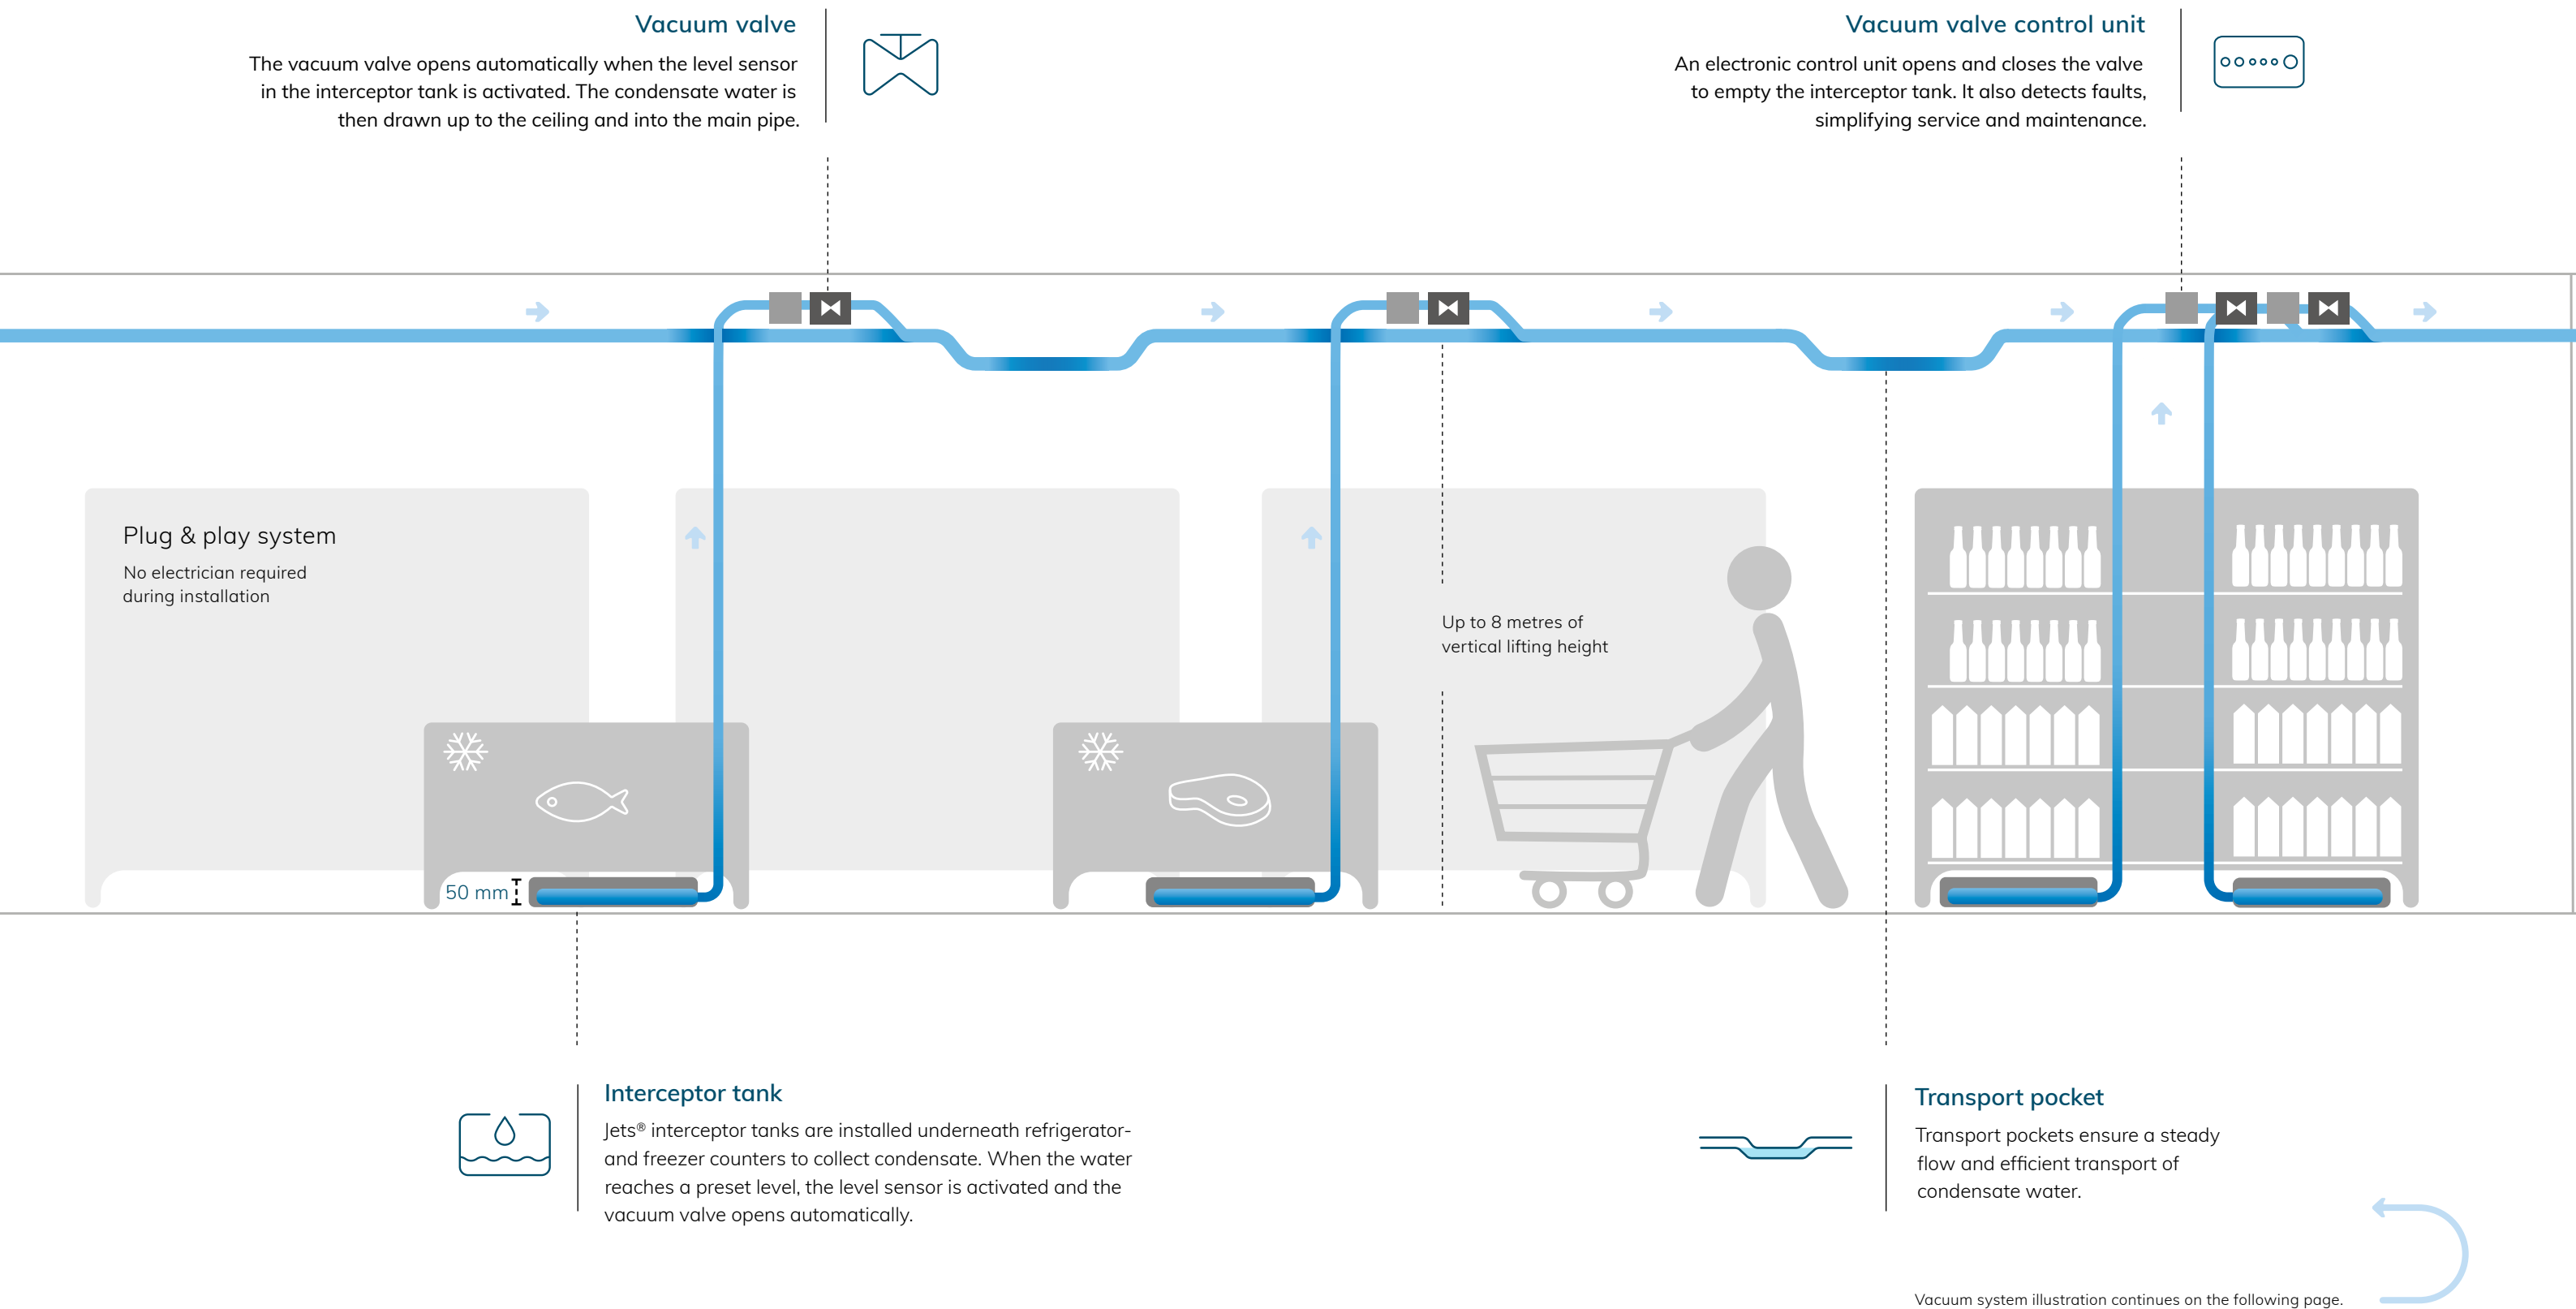

Easier refurbishment

Changes to store layout and refrigeration units can be made without breaking into the floor, with minimal disruption to store operations.

One solution for multiple needs. Jets® vacuum technology can handle both condensate and wastewater from sinks, coffee machines and toilets. Designed in separate systems, but with the same benefits.

The principle behind the Jets® vacuum system for Supermarkets

Greywater tank

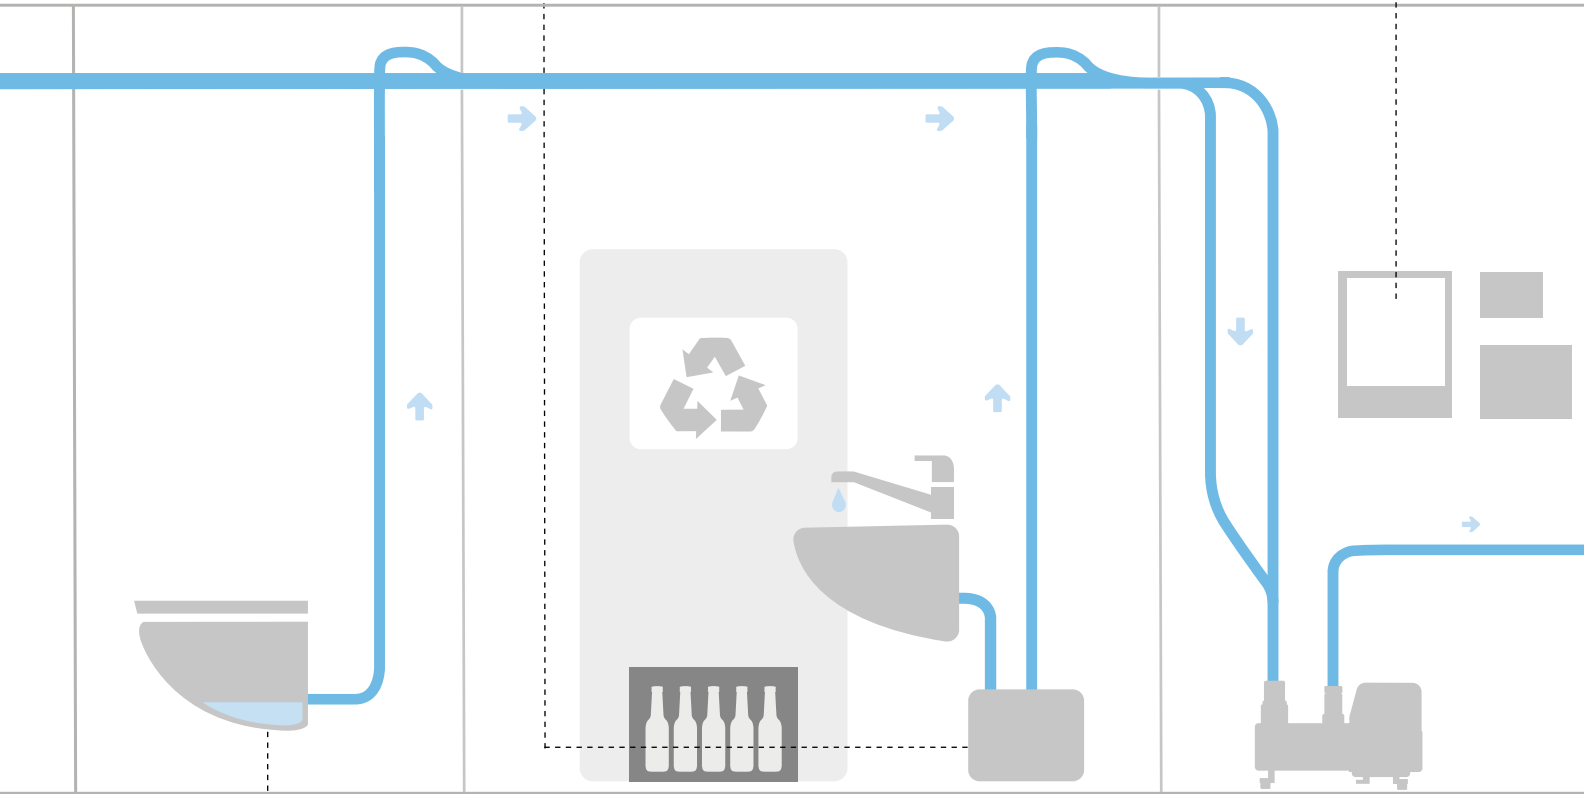

A Jets® vacuum system can also handle greywater from all water sources.

Options for alarm handling, monitoring and control

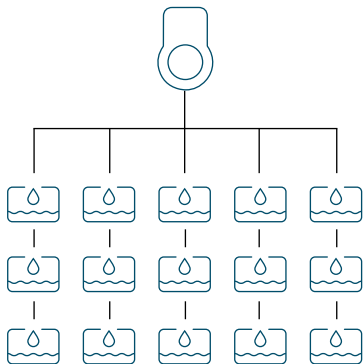

Control panel that combines a status overview of all parts of the system, alarm management and advanced settings. This allows for easy service and maintenance, as well as making adjustments if needed.

Compact solution
High capacity

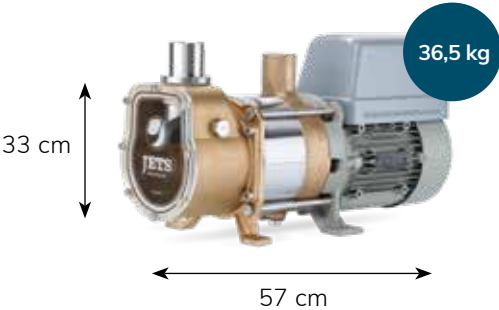

Every square metre counts. With low-profile tanks and a compact pump, our vacuum system makes efficient use of space. A single Vacuumarator® pump can handle multiple water sources, minimising space requirements, simplifying installation and reducing the need for equipment.

A single Vacuumarator® pump serves the entire vacuum drainage system at the REMA 1000 store in Ulsteinvik, Norway.

One Vacuumarator® pump can serve up to 15 suction points.

Vacuum toilet

Our water-saving toilets are connected by utilising a separate vacuum system. They can be installed in locations where conventional toilets are difficult to accommodate.

Vacuumarator® pump

The patented Vacuumarator® pump is at the heart of the system and can transport both condensate and other wastewater. The pump is highly energy-efficient and can serve up to 15 suction points.

What matters to your store?	Jets® vacuum	Other vacuum suppliers	Other pump types	Traditional drainage

Flexibility in store layout	●●●●○	●●●●○	●●●●●	●○○○○	
Simple installation without store intervention	●●●●●	●●●●○	●●●●○	●○○○○	
Compact solution with small footprint	●●●●●	●●●○○	●●●○○	●●●●●	

Jets® INSIGHT

Jets® INSIGHT is a cloud-based solution for monitoring, alarms and remote control.

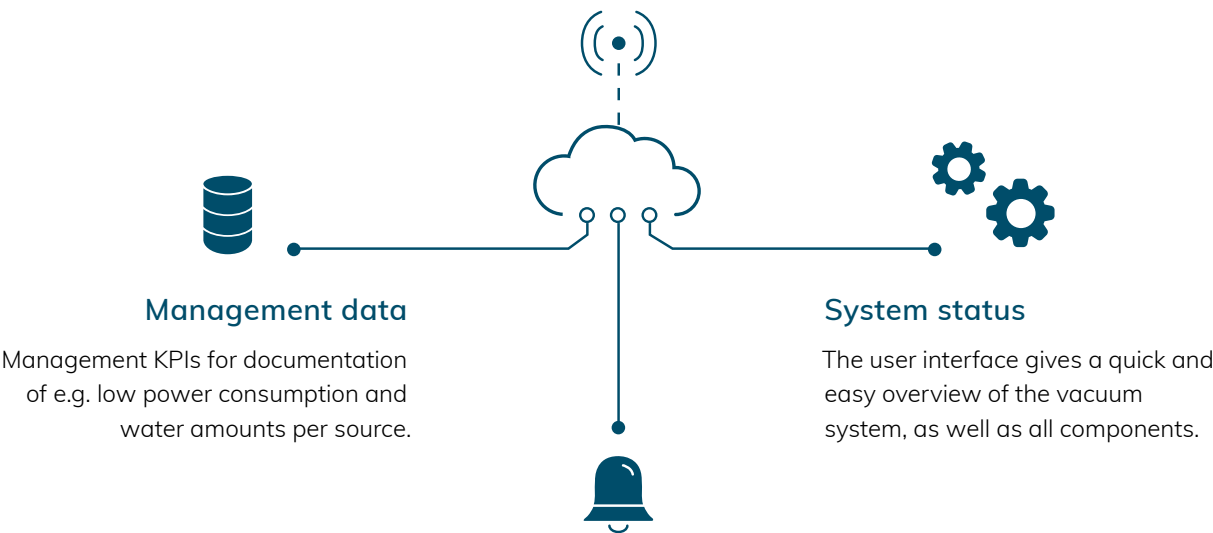

The interface provides real-time system insights, early warnings and the ability to resolve issues before they affect operations. With proactive monitoring, intelligent alarms and remote access, Jets® INSIGHT maximises uptime and makes maintenance more efficient – saving both time and costs.

- Maximum uptime
- Actionable insights
- Cost-effective operation

Remote control

Approved service personnel can operate the vacuum system from a computer or mobile device
- discharging tanks, adjusting vacuum level, etc.

Alarm management

In case of errors, alarms detailing what is happening and which component is affected are being sent directly to the responsible service personnel.

Flexibility for every project

Jets® vacuum technology offers greater freedom in choosing a location and designing your store, regardless of existing drainage – whether developing a new building, establishing a store in existing premises or refurbishing the current location.

New building

In larger construction projects, not all decisions are made before building begins. Premises, tenants and store layouts may change along the way.

With Jets® vacuum drainage, more options can remain open for longer, as the drainage system can be adapted more easily when plans change.

Existing premise

Premises in attractive, high-footfall areas – such as older or historic buildings and shopping centers – may lack the drainage infrastructure a supermarket requires.

With Jets®, vacuum drainage pipes can be routed above ceilings and existing structures, making more premises suitable for use without extensive structural work.

Refurbishment

Changing shopping habits, new concepts and product ranges mean stores need to adapt over time.

With Jets®, refrigerator and freezer counters and other equipment can be relocated without extensive work on floors, simplifying refurbishment and minimising disruption to store operations.

« The installation was quick and straightforward, which was important given the tight schedule for the refurbishment. »

- STEVEN KEMPTON Installer at contractor Svein Roppen AS

We really don't have to think about it. The vacuum system simply does its job, and we haven't experienced any downtime since it was installed.

- JOHNNY MORK Store manager, REMA 1000 Ulsteinvik.

Jets® gives us the flexibility we need to remodel the store whenever we like – at practically no cost at all.

Upgrading to Jets® means we save money because of easier assembly work and easier modifications when the time comes to remodel the store.

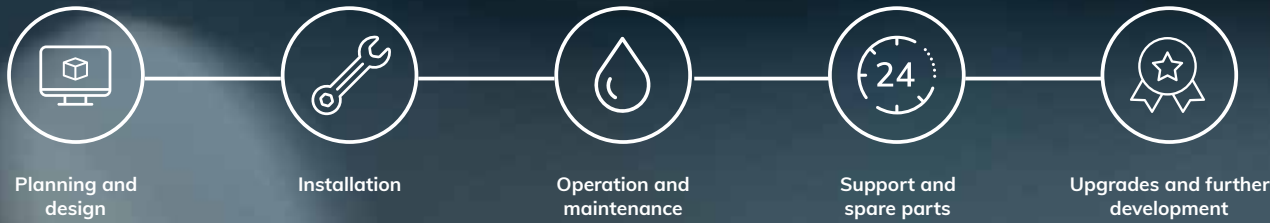

- SVEIN ARILD ENDAL Store Development Manager at ASKO

- JARI PIHLAJAMAA Building Services Manager, Kesko Grocery Trade

We support your system throughout its lifetime

Experience builds confidence.
With over 40 years of experience in vacuum technology and installations worldwide, we know what it takes to ensure reliable operation throughout the system's lifetime.

Getting started

A good system starts with proper planning. From design and engineering to installation and commissioning, JETS provides technical expertise and support – ensuring the solution is tailored to the store and designed for reliable long-term operation.

Planning and system design
JETS and our representatives take pride in providing a thoroughly planned and neatly designed system that caters to the specific store's needs and existing layout.

Installation and commissioning
We provide support throughout installation, ensuring the system is correctly installed, tested and ready for operation. Our close collaboration with installation partners ensures an efficient and reliable process.

Lifetime support

Once the system is operational, JETS continues to provide support. With service, technical support, genuine Jets® spare parts and upgrade options, we help ensure reliable, predictable operation – allowing the system to evolve with the store's needs.

Operation and maintenance
Proper maintenance and qualified servicing help ensure reliable operation, minimise downtime and extend system life. JETS and our network of service partners provide servicing and genuine Jets® spare parts.

24/7 Service and Support
When you need assistance, technical support is available through our representatives and JETS. Our technical support team is available around the clock to provide guidance and help with troubleshooting.

You are always welcome to contact us to learn more about Jets® drainage solutions for supermarkets. Get in touch with us directly or contact your nearest representative.

www.jetsgroup.com

Supermarkets choose Jets® for flexible solutions that offer greater freedom in planning, installation and future refurbishments – while ensuring reliable operation and easy maintenance.

Easier installation

Installation can be conducted with next to no intervention in the building structures, as well as minimal disruption to store operations.

Greater flexibility

Adapt your store as your business evolves. Relocate, expand and adjust the layout as needed.

Reliable operation

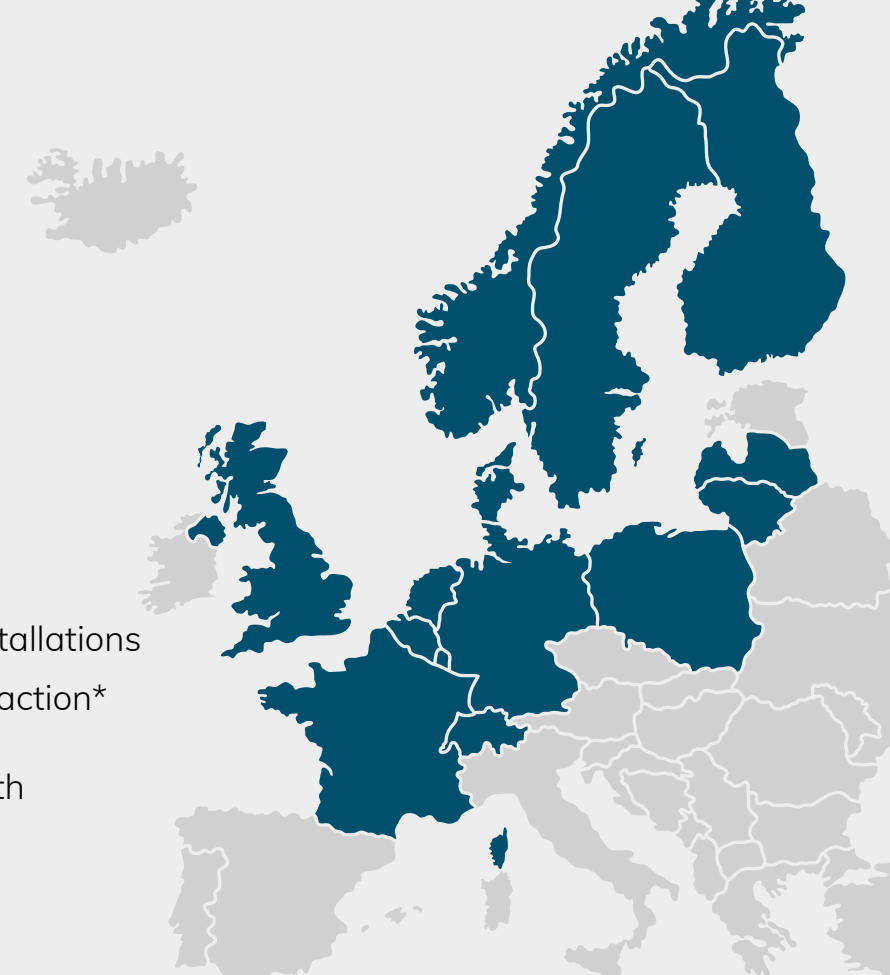

Designed for consistent high performance, superior system uptime and minimal maintenance requirements – every day.

Lower lifecycle costs

Reduce installation, operating and maintenance costs, as well as future investment costs.

We have representatives worldwide and provide solutions for a wide range of markets. The map shows where Jets® vacuum system for supermarkets are used in supermarkets across Europe.

3 500+ installed systems

13 countries with successful installations

5,7 out of 6,0 in customer satisfaction*

Selected supermarket chains with Jets® systems installed:

* Based on a JETS customer satisfaction survey conducted in 2025.
